

HOW TO CREATE YOUR OWN CANDLE ARRANGEMENT

Using AquaGems

In this arrangement, a lit candle within AquaGems will create beautiful sparkling light effects.

What you will need:

- ONE JARRED CANDLE. Round, square, or rectangular.
- ONE GLASS VASE. Vase should be about the same shape as your candle, but about 1 to 3 inches larger around than your candle. The vase should be about the same height or a little taller than the candle.
- AQUAGEMS. For a smaller vase, a 10-gram package of dry (or a bottle of hydrated) AquaGems may be enough. For a larger vase, a 40-gram package of dry (or several bottles of hydrated) AquaGems may be needed.

Where to get these materials:

- Round glass bowls are available seasonally at your local craft store or florist or through online vendors.
- AquaGems are manufactured by AquaGems of Idaho, LLC.

How to prepare:

1. If you have bought the dry form of AquaGems, you will need to place them in a water-filled container and allow 4 to 6 hours for the Gems to hydrate (see instructions on the packaging).

If you have bought the bottled form, your Gems are fully hydrated and ready for use immediately.

2. Remove any labels from your candle, so they don't block the lighting.
3. Fill your vase 1/2 to 2/3 full of AquaGems.
4. Set your jarred candle down into the AquaGems until it hits the bottom of the vase.
5. Add or remove AquaGems so they are level with the top of your candle.
6. Light the candle and enjoy the sparkling light effects you have just created!

Note: When the AquaGems start to dehydrate after a few weeks, remove the jarred candle. Leave the AquaGems in place in the vase, and add water. After a few hours, drain off excess water and replace candle. You can do this over and over again.
